

i have a Problem...

Posted by TMEddo - 21 Nov 2011 19:43

on the Minecraft server, me and my friends built an epic base under ground next to a completely destroyed NPC village. someone has reset the NPC village back to normal and set it as a safe zone, which also made our base safe so we cant touch it and half of it has been reset since it was underneath the village:-o ! If possible, i would like it to be unclaimed as safe so i can collect everything and leave, so i can build one somewhere else. and if this isnt to much to ask, have it all back and not move.

Thanks for taking your time to read

Hello mate and I'm very sorry for your base, and I believe it is really epic, but as usual, I warn players not to build near spawn cause sometimes things like this happen.

I won't recover the base, it is not possible and I do need to have the safe area huge.

I will be glad if you continue to play on our server.

Once again, Sorry.
