

Images of space on a budget.

Posted by DreamState - 14 Sep 2009 16:50

From Slashdot.

Two MIT students have successfully photographed the earth from space on a strikingly low budget of \$148. Perhaps more significantly, they managed to accomplish this feat using components available off-the-shelf to the average layperson, opening the doors for a new generation of amateur space enthusiasts. The pair plan to launch again soon and hope that their achievements will inspire teachers and students to pursue similar endeavors.
