# Test your computer against advanced attacks!

Posted by slaB - 15 Dec 2008 18:59

_____

A while ago I installed Outpost Firewall Pro, which lead me to this page:

[www.pcflank.com/index.htm](http://www.pcflank.com/index.htm)

This site will test how well your privacy is protected against attacks and it'll check out how well your firewall works when launching a file from you local drive (for that particular test you'll have to download a small file). This is 100 % secure and can't do you any harm at all. And it will give you advice to what to download and what to do etc, depends on the results of the test.

Post your results and protect yourself by getting a better anti-virus/firewall.

My computer is 100 % protected against all the tests : >

Firewall: Outpost Firewall Pro

Antivirus: Kaspersky

Do care for your privacy!
