

WCS Server
Posted by Wörzi - 14 Dec 2010 12:55

Hello all,

some students of my university and i bought a server for our lan-party. We made a normal cs-server on it. Now we tried to make a wcs server on it, but it didn't worked. We tried a introduction from the internet with the same result. Maybe the admin, who made the TWK WCS Server can give me a guidance how to make it, or can give me a link of a website where it's explained well (in english or in german).

Thank you

WCS must be enabled in the threddsConfig.xml configuration file before it can be used. This is done by adding an allow element to the WCS element as follows:
`<allow />`
`true`
...
Once WCS is enabled, datasets can be configured to have a WCS access method in the TDS catalog configuration files similar to how other services are configured. The service element's serviceType and base attribute values must be as follows:
